PRELIMINARY AMENDMENT A**PRIOR TO ACTION**

APPLICANT(S): RENATE ZYGAN-MAUS
ATTORNEY DOCKET NO.: P01,0010
INTERNATIONAL APPLICATION NO: PCT/EP99/05651
INTERNATIONAL FILING DATE: 04 AUGUST 1999
INVENTION: METHOD FOR ADMINISTERING A SERVICE FOR A
SUBSCRIBER

10

Assistant Commissioner for Patents,
Washington D.C. 20231

Sir:

15

Applicants herewith amend the above-referenced PCT application, and
request entry of the Amendment prior to examination on the United States
Examination Phase.

IN THE CLAIMS:

20

On page 6:

replace line 1 with --WHAT IS CLAIMED IS:--;

Please replace original claims 1-6 with the following rewritten claims 1-6,
referring to the mark-ups in Appendix A.

- 25 1. (Amended) A method for administering a function of a service, comprising the
steps of:

accepting a request for administration of said function via a mobile network
terminal device of a mobile network subscriber;
identifying said mobile network subscriber;

instructing, following a successful identification, said mobile network subscriber that said service should now be informed of a connection number of a fixed network terminal device for said administration of said function;

5 allocating a connection number communicated after instructing said mobile network subscriber to said mobile network subscriber; and

controlling a handling of a call initiated from said fixed network terminal device via said service, said call being allocated to said mobile network subscriber with assistance of said connection number of said fixed network, dependent on a profile of said mobile network subscriber.

10

2. (Amended) The method according to claim 1, further comprising the step of informing said mobile network subscriber of a selection code that is to be additionally employed given use of said fixed network terminal device via said service.

15 3. (Amended) The method according to claim 1, further comprising the step of automatically de-registering said fixed network terminal device that has been employed after expiration of a prescribable time or by an explicit de-registration procedure via said mobile network terminal device, resulting in a loss of a property of being able to be used by said mobile network subscriber according to said
20 subscriber's profile.

4. (Amended) A service logic for control of a service, comprising:
means for accepting a request for administering a function of said service via a mobile network terminal device of a mobile network subscriber;
25 means for subsequently identifying said mobile network subscriber;
means for instructing, following a successful identification, said mobile network subscriber that it should now be informed of a connection number of a fixed network terminal device for the administration of said function;
means for allocating a connection number communicated after instructing
30 said mobile network subscriber to said mobile network subscriber; and

means for controlling a handling of a call initiated from said fixed network terminal device via said service, said call being allocated to said mobile network subscriber with assistance of said connection number of said fixed network, dependent on a profile of said mobile network subscriber.

5
5. (Amended) A service logic according to claim 4, further comprising a means of informing said mobile network subscriber of a selection code that is to be additionally employed given use of said fixed network terminal device via said service.

10
6. (Amended) A service logic according to claim 4, further comprising:
means for automatically de-registering said fixed network terminal device that has been employed after expiration of a prescribable time or by an explicit de-registration procedure via said mobile telephone, resulting in a loss of a property of
15 being able to be used by the mobile network subscriber according to said subscriber's user profile.

REMARKS

The present Amendment revises the specification and claims to conform to
20 United States patent practice, before examination of the present PCT application in the United States National Examination Phase. Pursuant to 37 CFR 1.125 (b), applicants have concurrently submitted a substitute specification, excluding the claims, and provided a marked-up copy. All of the changes are editorial and applicant believes no new matter is added thereby. The amendment, addition,
25 and/or cancellation of claims is not intended to be a surrender of any of the subject matter of those claims. Please note that the Abstract of the Substitute Specification is simply the Abstract identified on the front of the International Application sheet.

Early examination on the merits is respectfully requested.

Submitted by,

(Reg. No. 45,877)

METHOD FOR ADMINISTERING A SERVICE FOR A SUBSCRIBER

For using an FMC service (FMC: fixed-mobile converged), the subscriber must be unambiguously identified and authorized (for example, in order to be able to carry out a correct charging). Given fixed-mobile converged services such as, for example, PCS (personal communication service) and CCS (corporate communication service), the service user sometimes employs a mobile terminal device and sometimes employs a fixed network terminal device.

In the mobile radiotelephone network, the unambiguous identification of the subscriber ensues automatically via the SIM card (SIM: subscriber identity module). The identification of the subscriber can also ensue automatically in the fixed network when the subscriber uses a terminal device that is administratively known to the FMC service and that is allocated to the subscriber, and when the fixed network supplies the calling line identity (connection number) of this fixed network terminal device to the FMC service logic.

Given employment of an arbitrary fixed network terminal (i.e. a fixed network terminal that was not administratively allocated to the subscriber by the FMC service), an automatic identification of the subscriber is not possible. However, a registration at one's own fixed network terminal device for employing this terminal device via a specific FMC service is also not possible, even though this would be meaningful in certain cases (for example, for teleworkers when specific calls from the connection are to be at the expense of the company (CCS service)).

Up to now, the fixed network has supported the use of outside terminals at one's own expense or, respectively, of one's own terminal at the expense of a third party only via the possibility of identifying and authenticating the calling party by means of an in-band dialogue. To that end, the calling party (for example, an IN service subscriber) must input a personal identification number (PIN) that the service logic compares to data stored in the network (for example, given credit card services or given UPT). Such a Prior Art is known, for example, from the document EP-A-0 602 779.

The document WO 98 09425 A, further, discloses a system for handling calls with whose assistance a fixed network terminal device that is to be employed for the continuation of the call can be indicated given an initiation of a call via a mobile
5 network terminal device.

The document EP-A-0844 799, finally, discloses a communication system for handling calls with whose assistance a mobile network subscriber can indicate via said subscriber's mobile network terminal device whether calls directed to said subscriber should be routed to a prescribable fixed network terminal device.

10 The invention is based on the object of facilitating the employability of a fixed network terminal device via a specific service for a mobile network subscriber.

An exemplary embodiment of the invention is explained in greater detail below with reference to the drawing, whereby the drawing comprises one Figure.

The Figure represents an exemplary configuration wherein the realization of the inventive service logic is based on an intelligent network IN. An inventive
 5 FMC service, however, need not necessarily be realized on a service control point SCP of an IN.

Given an FMC service whose service logic is realized in a service control point SCP, the caller has a mobile telephone GSM available. Given an access of the subscriber to the FMC service via the mobile telephone, the FMC service logic
 10 receives the mobile radiotelephone number MSISDN of the FMC service subscriber that is administratively known to the FMC service logic and that was authenticated in the mobile radiotelephone network PLMN (given an IN-based FMC service, for example, the mobile radiotelephone number of the FMC service subscriber is transmitted in the CallingPartyNumber parameter of the standardized IN protocol, see
 15 ETSI Core INAP or ITU-T Recommendations Q.1218/Q.1228). The FMC service logic can automatically identify and authorize the FMC subscriber on the basis of the subscriber's mobile radiotelephone number.

This can be utilized by the subscriber of the FMC service for the use of an arbitrary fixed network terminal device in a fully digital fixed network PSTN that
 20 transmits the CallingLineIdentity in order to avoid the employment of a PIN. The procedure for this is as follows:

Phase 1:

The subscriber selects an FMC service access code at the mobile telephone GSM. The access request is potentially forwarded to the FMC service across network
 25 boundaries (here, from a mobile network PLMN via a digital fixed network PSTN). The FMC service automatically identifies the subscriber on the basis of the subscriber's mobile radiotelephone number MSISDN. In response thereto, the FMC service initiates that the subscriber should now inform the service of a connection number of a fixed network terminal device. Via voice or DTMF input, the subscriber
 30 enters the CallingLineIdentity of the fixed network terminal device that he would like

to use at his own expense for outgoing calls or other line-switched services (for example, data transmission) for a definable time duration or, respectively, until an explicit de-registration. The FMC service subsequently registers the terminal device and assigns it to the subscriber. Optionally, the FMC service can communicate a selection code to the subscriber that is to be additionally employed given utilization of this fixed network terminal device (the service can distinguish between a plurality of inventive outside users of the fixed network terminal device on the basis of the selection code).

Phase 2:

The subscriber selects a specific FMC service access code at the fixed network terminal device and, optionally, an additional, temporary selection code before the destination telephone number. The FMC service access number is triggered in the fixed network and an inquiry is made at the FMC service logic (for example, with the existing IN procedures). This identifies the FMC service subscriber on the basis of the CallingLineIdentity of the fixed network terminal device registered in phase 1 that is co-supplied in a fully digital fixed network and – optionally – also on the basis of the temporary selection code in the selected numbers (INAP parameter CalledPartyNumber), and decides about further handling of the call (for example, charge accrual) on the basis of the FMC service subscriber profile). The FMC service logic controls the further handling of the call (for example, according to the existing IN procedures). The freedom from cost for the owner of the fixed network terminal can be assured on the basis of the selected, specific FMC service access code in the fixed network subscriber switching center on the basis of administrative data or controlled by the FMC service logic (for example, with the assistance of existing IN procedures).

The FMC service subscriber can also use the registered fixed network terminal device for subsequent calls in the same way without requiring a separate PIN therefor, namely until a de-registration ensues.

Phase 3:

Either automatically after the expiration of a prescribable time and/or by an explicit de-registration procedure via the mobile telephone, the fixed network terminal device that has been employed loses the property of being able to be used by the FMC service subscriber at the subscriber's own expense or, respectively, of being able to be used by the FMC service subscriber at the expense of a third party. (Given an explicit de-registration procedure, which is again to be implemented via the mobile network terminal device, analogous to the registration procedure, the FMC service checks whether there is already a registration for the CallingLineIdentity indicated by the subscriber. When this is the case, the de-registration is implemented.)

The administration of subscriber-individual PINs for the use of arbitrary fixed network terminals is thus superfluous for FMC services.

FMC service sub-functions other than the described method for using arbitrary fixed network terminals can also be administered without the employment of a PIN by the subscriber when the subscriber implements the administration only via his mobile radiotelephone. The required subscriber identification is carried out by the mobile radiotelephone network in the same way as described for the method for using arbitrary fixed network terminals. Subscriber-individual PINs can thus be generally foregone in FMC services when all subscriber inputs for administration of services ensue only via the subscriber's mobile radiotelephone.

Abbreviations Employed:

BTS	: base transceiver system
BSC	: base station controller
HLR/AC	: home location register / authentication center
IN	: intelligent network
INAP	: In application protocol
ISUP	: ISDN user part
LEX-SSP	: Local exchange with SSP functionality
MSC-SSP	: Mobile switching center with SSP functionality
MAP	: mobile application part

PSTN: : Public switched telephone network
PLMN : public land mobile network
SSP : service switching point

Patent Claims

1. Method for administering a function of a service, in accord wherewith
 - a request for the administration of the function is accepted via a mobile network terminal device of a mobile network subscriber;
 - 5 -- the mobile network subscriber is subsequently identified;
 - following a successful identification, the mobile network subscriber is instructed that the service should now be informed of a connection number of a fixed network terminal device for the administration of the function;
 - a connection number communicated thereupon is allocated to the mobile network subscriber;
 - 10 -- the handling of a call initiated from the fixed network terminal device via the service, said call being allocated to the mobile network subscriber with the assistance of the connection number of the fixed network , is controlled dependent on the profile of the mobile network subscriber.
- 15 2. Method according to claim 1, characterized in that the mobile network subscriber is informed of a selection code that is to be additionally employed given use of the fixed network terminal device via the service.
3. Method according to claim 1 or 2, characterized in that the fixed network terminal device that has been employed is de-registered automatically after
 - 20 expiration of a prescribable time and/or by an explicit de-registration procedure via the mobile telephone, as a result whereof it loses the property of being able to be used by the mobile network subscriber according to said subscriber's profile.
4. Service logic for the control of a service that
 - accepts a request for administering a function of the service via a mobile
 - 25 network terminal device of a mobile network subscriber;
 - subsequently identifies the subscriber;
 - following a successful identification, instructs the mobile network subscriber that it should now be informed of a connection number of a fixed network terminal device for the administration of the function;
 - 30 -- allocates a connection number communicated thereupon to the mobile network subscriber;

then controls the handling of a call initiated from the fixed network terminal device via the service, said call being allocated to the mobile network subscriber with the assistance of the connection number of the fixed network, dependent on the profile of the mobile network subscriber.

5 5. Service logic according to claim 6 [sic], characterized in that it informs the mobile network subscriber of a selection code that is to be additionally employed given use of the fixed network terminal device via the service.

10 6. Service logic according to claim 4 or 5, characterized in that it de-registers the fixed network terminal device that has been employed automatically after expiration of a prescribable time and/or by an explicit de-registration procedure via the mobile telephone, as a result whereof it loses the property of being able to be used by the mobile network subscriber according to said subscriber's user profile.

SPECIFICATION

TITLE

METHOD FOR ADMINISTERING A SERVICE FOR A SUBSCRIBER

5 BACKGROUND OF THE INVENTION

Field of the Invention

1 The invention relates to a method and associated logic for administering a function of a service in a telecommunications network.

10 Description of the Related Art

2 For using an FMC (fixed-mobile converged) service, the subscriber must be unambiguously identified and authorized (for example, in order to be able to carry out a correct charging). For fixed-mobile converged services such as PCS (personal communication service) and CCS (corporate communication service), the service
15 user sometimes employs a mobile terminal device and sometimes employs a fixed network terminal device.

3 In the mobile radiotelephone network, the unambiguous identification of the subscriber ensues automatically via a SIM (subscriber identity module) card. The identification of the subscriber can also ensue automatically in the fixed network
20 when the subscriber uses a terminal device that is administratively known to the FMC service and that is allocated to the subscriber, and when the fixed network supplies the calling line identity (connection number) of this fixed network terminal device to the FMC service logic.

4 When using an arbitrary fixed network terminal (i.e., a fixed network terminal
25 that was not administratively allocated to the subscriber by the FMC service), an automatic identification of the subscriber is not possible. However, a registration at one's own fixed network terminal device for employing this terminal device via a specific FMC service is also not possible, even though this would be meaningful in certain cases (for example, for teleworkers when specific calls from the connection
30 are to be at the expense of the company (CCS service)).

5 Up to now, the fixed network has supported the use of outside terminals at

one's own expense or of one's own terminal at the expense of a third party only via the possibility of identifying and authenticating the calling party via an in-band dialogue. To that end, the calling party (for example, an IN service subscriber) must input a personal identification number (PIN) that the service logic compares to data stored in the network (for example, for credit card services or for UPT). Such prior art is known, for example, from the European Patent document EP-A-0 602 779.

6 Furthermore, the International Patent document WO 98 09425 A discloses a system for handling calls with whose assistance a fixed network terminal device that is to be employed for the continuation of the call can be indicated given an initiation of a call via a mobile network terminal device.

7 Finally, the European Patent document EP-A-0844 799 discloses a communication system for handling calls with whose assistance a mobile network subscriber can indicate via said subscriber's mobile network terminal device whether calls directed to this subscriber should be routed to a prescribable fixed network terminal device.

SUMMARY OF THE INVENTION

8 The invention is based on the object of facilitating the employability of a fixed network terminal device via a specific service for a mobile network subscriber.

BRIEF DESCRIPTION OF THE DRAWINGS

9 An exemplary embodiment of the invention is explained in greater detail below with reference to the single Figure, which is a block schematic diagram showing the inventive arrangement.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

10 The Figure represents an exemplary configuration in which the realization of the inventive service logic is based on an intelligent network IN. An inventive FMC service, however, need not necessarily be realized on a service control point SCP of an IN.

11 For an FMC service whose service logic is realized in a service control point SCP, the caller has a mobile telephone GSM available. For an access of the

subscriber to the FMC service via the mobile telephone, the FMC service logic receives the mobile radiotelephone number MSISDN of the FMC service subscriber that is administratively known to the FMC service logic and that was authenticated in the mobile radiotelephone network PLMN (given an IN-based FMC service, for example, the mobile radiotelephone number of the FMC service subscriber is transmitted in the CallingPartyNumber parameter of the standardized IN protocol, see ETSI Core INAP or ITU-T Recommendations Q.1218/Q.1228). The FMC service logic can automatically identify and authorize the FMC subscriber on the basis of the subscriber's mobile radiotelephone number.

12 This can be utilized by the subscriber of the FMC service for the use of an arbitrary fixed network terminal device in a fully digital fixed network PSTN that transmits the CallingLineIdentity in order to avoid the employment of a PIN. The procedure for this is as follows:

Phase 1:

13 The subscriber selects an FMC service access code at the mobile telephone GSM. The access request is potentially forwarded to the FMC service across network boundaries (here, from a mobile network PLMN via a digital fixed network PSTN). The FMC service automatically identifies the subscriber on the basis of the subscriber's mobile radiotelephone number MSISDN. The FMC service responds by initiating that the subscriber should now inform the service of a connection number of a fixed network terminal device. Via voice or DTMF input, the subscriber enters the CallingLineIdentity of the fixed network terminal device that he would like to use at his own expense for outgoing calls or other line-switched services (for example, data transmission) for a definable time duration or, respectively, until an explicit de-registration. The FMC service subsequently registers the terminal device and assigns it to the subscriber. Optionally, the FMC service can communicate a selection code to the subscriber that is to be additionally employed for utilization of this fixed network terminal device (the service can distinguish between a plurality of inventive outside users of the fixed network terminal device on the basis of the selection code).

Phase 2:

14 The subscriber selects a specific FMC service access code at the fixed
network terminal device and, optionally, an additional, temporary selection code
5 before the destination telephone number. The FMC service access number is
triggered in the fixed network and an inquiry is made at the FMC service logic (for
example, with the existing IN procedures). This identifies the FMC service
subscriber on the basis of the CallingLineIdentity of the fixed network terminal device
registered in Phase 1 that is co-supplied in a fully digital fixed network and
10 (optionally) also on the basis of the temporary selection code in the selected
numbers (INAP parameter CalledPartyNumber), and decides about further handling
of the call (for example, charge accrual) on the basis of the FMC service subscriber
profile). The FMC service logic controls the further handling of the call (for example,
according to the existing IN procedures). The freedom from cost for the owner of the
15 fixed network terminal can be assured on the basis of the selected, specific FMC
service access code in the fixed network subscriber switching center on the basis of
administrative data or controlled by the FMC service logic (for example, with the
assistance of existing IN procedures).

15 The FMC service subscriber can also use the registered fixed network
20 terminal device for subsequent calls in the same way without requiring a separate
PIN, namely until a de-registration takes place.

Phase 3:

16 Either automatically after the expiration of a prescribable time and/or by an
25 explicit de-registration procedure via the mobile telephone, the fixed network
terminal device that has been employed loses the property of being able to be used
by the FMC service subscriber at the subscriber's own expense or of being able to
be used by the FMC service subscriber at the expense of a third party.)For an
explicit de-registration procedure, which is again to be implemented via the mobile
30 network terminal device, analogous to the registration procedure, the FMC service

checks whether there is already a registration for the CallingLineIdentity indicated by the subscriber. When this is the case, the de-registration is implemented.)

17 The administration of subscriber-individual PINs for the use of arbitrary fixed network terminals is thus superfluous for FMC services.

- 5 18 FMC service sub-functions other than the described method for using arbitrary fixed network terminals can also be administered without the employment of a PIN by the subscriber when the subscriber implements the administration only via his mobile radiotelephone. The required subscriber identification is carried out by the mobile radiotelephone network in the same way as described for the method
- 10 for using arbitrary fixed network terminals. Subscriber-individual PINs can thus be generally foregone in FMC services when all subscriber inputs for administration of services ensue only via the subscriber's mobile radiotelephone.

- 19 The above-described method and associated logic are illustrative of the principles of the present invention. Numerous modifications and adaptations thereof
- 15 will be readily apparent to those skilled in this art without departing from the spirit and scope of the present invention.

TITLE

METHOD FOR ADMINISTERING A SERVICE FOR A SUBSCRIBER

BACKGROUND OF THE INVENTION

Field of the Invention

1 The invention relates to a method and associated logic for administering a function of a service in a telecommunications network.

Description of the Related Art

2 For using an FMC [service {FMC:}] (fixed-mobile converged) **service**, the subscriber must be unambiguously identified and authorized (for example, in order to be able to carry out a correct charging). [Given] **For** fixed-mobile converged services such as[, for example,] PCS (personal communication service) and CCS (corporate communication service), the service user sometimes employs a mobile terminal device and sometimes employs a fixed network terminal device.

3 In the mobile radiotelephone network, the unambiguous identification of the subscriber ensues automatically via [the] **a SIM [card {SIM:}]** (subscriber identity module) **card**. The identification of the subscriber can also ensue automatically in the fixed network when the subscriber uses a terminal device that is administratively known to the FMC service and that is allocated to the subscriber, and when the fixed network supplies the calling line identity (connection number) of this fixed network terminal device to the FMC service logic.

[Given employment of] **4 When using** an arbitrary fixed network terminal (i.e., a fixed network terminal that was not administratively allocated to the subscriber by the

FMC service), an automatic identification of the subscriber is not possible. However, a registration at one's own fixed network terminal device for employing this terminal device via a specific FMC service is also not possible, even though this would be meaningful in certain cases (for example, for teleworkers when specific calls from the connection are to be at the expense of the company (CCS service)).

5 **5** Up to now, the fixed network has supported the use of outside terminals at one's own expense or, ~~respectively,~~ of one's own terminal at the expense of a third party only via the possibility of identifying and authenticating the calling party ~~[by means of]~~ via an in-band dialogue. To that end, the calling party (for example, an IN service subscriber) must input a personal identification number (PIN) that the service logic compares to data stored in the network (for example, ~~[given]~~ for credit card services or ~~[given]~~ for UPT). Such ~~[a Prior Art]~~ prior art is known, for example, from the European Patent document EP-A-0 602 779.

15 ~~[The]~~ **6** Furthermore, the International Patent document WO 98 09425 A~~;~~ furth~~er,~~ discloses a system for handling calls with whose assistance a fixed network terminal device that is to be employed for the continuation of the call can be indicated given an initiation of a call via a mobile network terminal device.

20 ~~[The]~~ **7** Finally, the European Patent document EP-A-0844 799~~;~~ final~~ly,~~ discloses a communication system for handling calls with whose assistance a mobile network subscriber can indicate via said subscriber's mobile network terminal device whether calls directed to ~~[said]~~ this subscriber should be routed to a prescribable fixed network terminal device.

SUMMARY OF THE INVENTION

25 **8** The invention is based on the object of facilitating the employability of a fixed network terminal device via a specific service for a mobile network subscriber.

BRIEF DESCRIPTION OF THE DRAWINGS

30 **9** An exemplary embodiment of the invention is explained in greater detail below with reference to the ~~[drawing, whereby the drawing comprises one Figure,~~ single Figure, which is a block schematic diagram showing the inventive arrangement,

DESCRIPTION OF THE PREFERRED EMBODIMENTS

10 The Figure represents an exemplary configuration ~~[wherein]~~ in which the realization of the inventive service logic is based on an intelligent network IN. An inventive FMC service, however, need not necessarily be realized on a service control point SCP of an IN.

5 ~~[Given]~~ **11** For an FMC service whose service logic is realized in a service control point SCP, the caller has a mobile telephone GSM available. ~~[Given]~~ For an access of the subscriber to the FMC service via the mobile telephone, the FMC service logic receives the mobile radiotelephone number MSISDN of the FMC service subscriber that is administratively known to the FMC service logic and that was authenticated in
10 the mobile radiotelephone network PLMN (given an IN-based FMC service, for example, the mobile radiotelephone number of the FMC service subscriber is transmitted in the CallingPartyNumber parameter of the standardized IN protocol, see ETSI Core INAP or ITU-T Recommendations Q.1218/Q.1228). The FMC service logic can automatically identify and authorize the FMC subscriber on the
15 basis of the ~~[subscriber=s]~~ **subscriber's** mobile radiotelephone number.

12 This can be utilized by the subscriber of the FMC service for the use of an arbitrary fixed network terminal device in a fully digital fixed network PSTN that transmits the CallingLineIdentity in order to avoid the employment of a PIN. The procedure for this is as follows:

20 Phase 1:

13 The subscriber selects an FMC service access code at the mobile telephone GSM. The access request is potentially forwarded to the FMC service across network boundaries (here, from a mobile network PLMN via a digital fixed network
25 PSTN). The FMC service automatically identifies the subscriber on the basis of the ~~[subscriber=s]~~ **subscriber's** mobile radiotelephone number MSISDN. ~~[In response thereto, the]~~ **The FMC service [initiates] responds by initiating** that the subscriber should now inform the service of a connection number of a fixed network terminal device. Via voice or DTMF input, the subscriber enters the CallingLineIdentity of the
30 fixed network terminal device that he would like to use at his own expense for outgoing calls or other line-switched services (for example, data transmission) for a definable time duration or, respectively, until an explicit de-registration. The FMC service subsequently registers the terminal device and assigns it to the subscriber.

Optionally, the FMC service can communicate a selection code to the subscriber that is to be additionally employed ~~[given]~~ **for** utilization of this fixed network terminal device (the service can distinguish between a plurality of inventive outside users of the fixed network terminal device on the basis of the selection code).

5

Phase 2:

14 The subscriber selects a specific FMC service access code at the fixed network terminal device and, optionally, an additional, temporary selection code before the destination telephone number. The FMC service access number is
10 triggered in the fixed network and an inquiry is made at the FMC service logic (for example, with the existing IN procedures). This identifies the FMC service subscriber on the basis of the CallingLineIdentity of the fixed network terminal device registered in ~~[phase]~~ **Phase 1** that is co-supplied in a fully digital fixed network and ~~[B-optionally B]~~ **(optionally)** also on the basis of the temporary selection code in the
15 selected numbers (INAP parameter CalledPartyNumber), and decides about further handling of the call (for example, charge accrual) on the basis of the FMC service subscriber profile). The FMC service logic controls the further handling of the call (for example, according to the existing IN procedures). The freedom from cost for the owner of the fixed network terminal can be assured on the basis of the selected,
20 specific FMC service access code in the fixed network subscriber switching center on the basis of administrative data or controlled by the FMC service logic (for example, with the assistance of existing IN procedures).

15 The FMC service subscriber can also use the registered fixed network terminal device for subsequent calls in the same way without requiring a separate
25 ~~[Pin therefor]~~ **PIN**, namely until a de-registration ~~[ensues]~~ **takes place**.

Phase 3:

16 Either automatically after the expiration of a prescribable time and/or by an explicit de-registration procedure via the mobile telephone, the fixed network terminal
30 device that has been employed loses the property of being able to be used by the FMC service subscriber at the ~~[subscriber's]~~ **subscriber's** own expense or, ~~respectively,~~ of being able to be used by the FMC service subscriber at the expense of a third party. ~~[(Given)]~~ **For** an explicit de-registration procedure, which is again to

be implemented via the mobile network terminal device, analogous to the registration procedure, the FMC service checks whether there is already a registration for the CallingLineIdentity indicated by the subscriber. When this is the case, the de-registration is implemented.)

5 **17** The administration of subscriber-individual PINs for the use of arbitrary fixed network terminals is thus superfluous for FMC services.

18 FMC service sub-functions other than the described method for using arbitrary fixed network terminals can also be administered without the employment of a PIN by the subscriber when the subscriber implements the administration only via his
10 mobile radiotelephone. The required subscriber identification is carried out by the mobile radiotelephone network in the same way as described for the method for using arbitrary fixed network terminals. Subscriber-individual PINs can thus be generally foregone in FMC services when all subscriber inputs for administration of services ensue only via the ~~{subscriber=s}~~ **subscriber's** mobile radiotelephone.

15 ~~[Abbreviations Employed:]~~ **19 The above-described method and associated logic are illustrative of the principles of the present invention. Numerous modifications and adaptations thereof will be readily apparent to those skilled in this art without departing from the spirit and scope of the present invention.**

15

ABSTRACT

20 The invention prevents the need for a subscriber to input a PIN to book a service with the purpose of managing this service from the subscriber side. This is achieved by using a mobile network terminal for the management. The mobile
5 subscriber reports a subscriber number of a fixed network terminal to the service, in which the subscriber number thus reported is allocated to the mobile network subscriber so that the mobile network subscriber can thereafter use the fixed network terminal for the special service, namely by debiting an account opened by the service.

(if applicable)

Ich bestätige hiermit, dass ich den Inhalt der obigen
Patentanmeldung einschliesslich der Ansprüche
durchgesehen und verstanden habe, die eventuell
durch einen Zusatzantrag wie oben erwähnt abgeän-
dert wurde.

I hereby state that I have reviewed and understand the
contents of the above identified specification,
including the claims as amended by any amendment
referred to above.

Ich erkenne meine Pflicht zur Offenbarung irgendwel-
cher Informationen, die für die Prüfung der vorliegen-
den Anmeldung in Einklang mit Absatz 37, Bundes-
gesetzbuch, Paragraph 1.56(a) von Wichtigkeit sind,
an.

I acknowledge the duty to disclose information which
is material to the examination of this application in
accordance with Title 37, Code of Federal
Regulations, §1.56(a).

Ich beanspruche hiermit ausländische Prioritätsvor-
teile gemäss Abschnitt 35 der Zivilprozessordnung der
Vereinigten Staaten, Paragraph 119 aller unten ange-
gebenen Auslandsanmeldungen für ein Patent oder
eine Erfindersurkunde, und habe auch alle Auslands-
anmeldungen für ein Patent oder eine Erfindersurkun-
de nachstehend gekennzeichnet, die ein Anmelde-
datum haben, das vor dem Anmeldedatum der
Anmeldung liegt, für die Priorität beansprucht wird.

I hereby claim foreign priority benefits under Title 35,
United States Code, §119 of any foreign application(s)
for patent or inventor's certificate listed below and
have also identified below any foreign application for
patent or inventor's certificate having a filing date
before that of the application on which priority is
claimed:
